ACTIVITY A1
Diagnose Quality Gaps from Evidence

Identify areas for improvement by separating evidence, symptoms and assumptions.

Participant scenario and completion checklist

Version 1.0 | 30 September 2026

Scenario

LPC's customer complaints doubled in six months. Late deliveries, burr defects and inconsistent certificates are repeatedly mentioned, but managers disagree about the main cause.

Organisation: LionCity Precision Components Pte Ltd (LPC). A Singapore SME with 85 employees producing precision aluminium components for commercial equipment.

Your task

Analyse LPC's complaint, defect and delivery evidence; prioritise improvement areas and connect them to customer impact.

Expected output: A completed quality-gap prioritisation matrix and evidence-backed problem statement.

Decision questions

1. Which three issues should LPC prioritise, and what evidence supports each choice?

2. What is a symptom, what is an observed fact and what remains an assumption?

3. How does each issue affect conformity, customer satisfaction, cost or risk?

Completion checklist

Done	Check	Evidence/reference
[ ]	Read the scenario and evidence table without proposing solutions yet.	
[ ]	Classify each item as fact, symptom, possible cause or missing evidence.	
[ ]	Score impact, frequency and evidence strength in the workbook.	
[ ]	Rank the top three gaps and write one measurable problem statement.	
[ ]	Peer-review the ranking and record one challenge to your reasoning.	
[ ]	All conclusions are traceable to evidence; assumptions are labelled.	
[ ]	A peer has challenged one key decision and the response is recorded.	
[ ]	The workbook passes the acceptance test below.	

Acceptance test

The top three gaps are traceable to supplied evidence; the problem statement contains a baseline, affected process and measurable effect.

Submission and debrief

Submit the completed Excel workbook using the trainer's naming convention. Be ready to explain one evidence-based decision, one uncertainty, and one improvement you would make with better data.
