# ACTIVITY A2
# Map and Improve the Order-to-Delivery Process

Perform process management and improvement using SIPOC, a process map and PDCA.

**Participant scenario and completion checklist**

Version 1.0 | 30 September 2026

## Scenario

Sales accepts emailed drawings, Planning creates job travellers, Production machines parts, Quality inspects and Logistics ships. Rework and missing revision information frequently surface late.

**Organisation:** LionCity Precision Components Pte Ltd (LPC). A Singapore SME with 85 employees producing precision aluminium components for commercial equipment.

## Your task

Map LPC's order-to-delivery process, expose hand-off risks and design a controlled future state.

**Expected output:** A SIPOC, current-state map, improvement hypothesis and PDCA action plan.

## Decision questions

**1.** Where does value enter and leave the process, and who owns the end-to-end result?

**2.** Which hand-offs create the greatest risk of wrong revision, delay or rework?

**3.** What process measures will show whether the future state performs better?

## Completion checklist

| Done | Check | Evidence/reference |
|---|---|---|
| [ ] | Define the process purpose, start/end points and customer outcome. | |
| [ ] | Complete the SIPOC before drawing detailed activities. | |
| [ ] | Map the current-state sequence, decisions, rework loops and evidence created. | |
| [ ] | Identify one bottleneck and one failure-demand loop using supplied data. | |
| [ ] | Design a future-state control and convert it into a PDCA experiment. | |
| [ ] | All conclusions are traceable to evidence; assumptions are labelled. | |
| [ ] | A peer has challenged one key decision and the response is recorded. | |
| [ ] | The workbook passes the acceptance test below. | |

## Acceptance test

The map has clear boundaries, owners, inputs, outputs, controls and measures; the PDCA experiment has a testable prediction.

## Submission and debrief

Submit the completed Excel workbook using the trainer's naming convention. Be ready to explain one evidence-based decision, one uncertainty, and one improvement you would make with better data.
