ACTIVITY A4
Set Quality Objectives and KPIs

Set relevant metrics and KPIs for process monitoring and decision-making.

Participant scenario and completion checklist

Version 1.0 | 30 September 2026

Scenario

LPC's current dashboard lists activity counts but no targets, owners, decision thresholds or links to customer outcomes.

Organisation: LionCity Precision Components Pte Ltd (LPC). A Singapore SME with 85 employees producing precision aluminium components for commercial equipment.

Your task

Translate LPC's quality policy into SMART objectives, operational measures and a review cadence.

Expected output: A KPI dictionary and dynamic dashboard with targets, formulas, status signals and ownership.

Decision questions

1. Which measures are leading, lagging, effectiveness or efficiency indicators?

2. What behaviour could each KPI unintentionally encourage?

3. What decision will management make when a KPI crosses its threshold?

Completion checklist

Done	Check	Evidence/reference
[ ]	Rewrite two broad intentions as SMART quality objectives.	
[ ]	Define each KPI's purpose, formula, unit, data source, owner and frequency.	
[ ]	Enter the supplied monthly data and verify formula-driven results.	
[ ]	Set target and escalation thresholds with documented rationale.	
[ ]	Review the dashboard and write the decision triggered by each red status.	
[ ]	All conclusions are traceable to evidence; assumptions are labelled.	
[ ]	A peer has challenged one key decision and the response is recorded.	
[ ]	The workbook passes the acceptance test below.	

Acceptance test

Every KPI has an auditable formula, source, owner, target and defined management response; workbook formulas return no errors.

Submission and debrief

Submit the completed Excel workbook using the trainer's naming convention. Be ready to explain one evidence-based decision, one uncertainty, and one improvement you would make with better data.
