ACTIVITY A5
Evaluate a Process Against QMS Requirements

Evaluate a process by linking requirements, controls, evidence and results.

Participant scenario and completion checklist

Version 1.0 | 30 September 2026

Scenario

Supplier approvals exist, but several files are incomplete and incoming defects have increased. Procurement says the process is compliant because a procedure exists.

Organisation: LionCity Precision Components Pte Ltd (LPC). A Singapore SME with 85 employees producing precision aluminium components for commercial equipment.

Your task

Assess LPC's supplier-control process using a requirements-to-evidence matrix without treating a checklist as proof.

Expected output: A clause applicability and evidence matrix with conformity judgements and follow-up questions.

Decision questions

1. What evidence shows implementation and effectiveness rather than documentation alone?

2. Which requirements are applicable to this process and why?

3. What additional evidence is needed before reaching a conclusion?

Completion checklist

Done	Check	Evidence/reference
[ ]	Define the process purpose, intended results and applicable requirements.	
[ ]	List the control claimed by LPC and the objective evidence available.	
[ ]	Rate evidence for relevance, reliability and sufficiency.	
[ ]	Compare actual results with planned results and requirements.	
[ ]	Record conformity, concern or evidence gap without inventing facts.	
[ ]	All conclusions are traceable to evidence; assumptions are labelled.	
[ ]	A peer has challenged one key decision and the response is recorded.	
[ ]	The workbook passes the acceptance test below.	

Acceptance test

Each judgement cites a requirement, evidence and result; unknowns remain evidence gaps rather than automatic nonconformities.

Submission and debrief

Submit the completed Excel workbook using the trainer's naming convention. Be ready to explain one evidence-based decision, one uncertainty, and one improvement you would make with better data.
