ACTIVITY A6
Conduct an Internal Audit Simulation

Assess QMS compliance through objective evidence, sampling and impartial reporting.

Participant scenario and completion checklist

Version 1.0 | 30 September 2026

Scenario

A customer returned parts made to an obsolete drawing revision. LPC needs an impartial internal audit before management review.

Organisation: LionCity Precision Components Pte Ltd (LPC). A Singapore SME with 85 employees producing precision aluminium components for commercial equipment.

Your task

Plan and conduct a simulated internal audit of LPC's order-review and production-control process.

Expected output: An audit plan, process-based checklist, evidence log and correctly worded findings.

Decision questions

1. What audit trail follows the customer requirement through planning, production, inspection and release?

2. What makes evidence objective and the sample appropriate?

3. Does each finding state requirement, evidence and the gap without prescribing a solution?

Completion checklist

Done	Check	Evidence/reference
[ ]	Set audit objectives, scope, criteria, timing and auditor independence.	
[ ]	Prepare open questions that follow the process and sample records.	
[ ]	Interview role-players and record exact evidence, not conclusions alone.	
[ ]	Triangulate documents, interviews and observations.	
[ ]	Classify and write findings; conduct a concise closing meeting.	
[ ]	All conclusions are traceable to evidence; assumptions are labelled.	
[ ]	A peer has challenged one key decision and the response is recorded.	
[ ]	The workbook passes the acceptance test below.	

Acceptance test

The audit trail is reproducible and every nonconformity statement includes the requirement, objective evidence and unmet condition.

Submission and debrief

Submit the completed Excel workbook using the trainer's naming convention. Be ready to explain one evidence-based decision, one uncertainty, and one improvement you would make with better data.
